Technologies

Languages: C++, Go, Java, TypeScript, Python, SQL

Systems & Performance: SIMD, Multithreading, Distributed Systems, gRPC, Protocol Buffers, WebRTC

Cloud & Infrastructure: Docker, Kubernetes, Helm, Terraform, AWS

Data & Storage: Apache Kafka, Redis, PostgreSQL, GraphQL, Vector Databases

Web & AI Technologies: ReactJS, NextJS, Node.js, GraphQL, Model Context Protocol (MCP)

Experience

Salesforce

Bangalore, Karnataka

Member of Technical Staff (MTS) - Tableau Engineering

April 2026 – Present

- Developed performance-critical C++ components for visualization rendering and data-processing pipelines, improving execution efficiency for large analytical workloads.
- Reduced CPU consumption of analytical rendering workflows by ~30% with **SIMD-vectorized** code paths, lowering cloud infrastructure costs and improving dashboard responsiveness.
- Enhanced **Geospatial Maps** infrastructure supporting large-scale spatial visualizations, improving rendering throughput and map interaction latency.
- Designed and implemented internal **gRPC** and **GraphQL** interfaces used for communication between visualization services and backend analytics systems.
- Built and maintained cross-language integrations using **JNI** between Java and native C++ services, enabling high-performance execution while preserving platform portability.

Oracle

Bangalore, Karnataka

Software Engineer

August 2023 – April 2026

- Engineered a **SIMD-optimized noise suppression module** using C++ intrinsics/WASM, reducing latency by 85% from 120ms down to 22ms.
- Architected a real-time **AI Agent framework** using **Model Context Protocol (MCP)** to ingest live streams with adaptive frame throttling.
- Bootstrapped the Oracle's **RTHS** later used in strategic customer demonstrations supporting multi-billion-dollar sales opportunities.
- Engineered **Simulcast** and **Dynacast** capabilities across mobile and backend media pipelines, improving adaptive real-time streaming under varying network conditions.

Oracle

Hyderabad, Telangana

Software Engineer Intern

February 2023 – July 2023

- Developed a custom **JNI binding engine** to surface deep C++ WebRTC metrics (jitter, RTT) to UI, reducing debugging effort by 75%.
- Refactored audio/video publishing architecture using **Kotlin structured concurrency**, reducing reconnect failures by ~60%.
- Automated **Protocol Buffers** build workflows, improving CI/CD reliability and stability.
- Designed resilient **gRPC** services with retry budgets and fault-tolerant communication patterns.

Awards and Recognition

- **Matt Beal Award for Brightest Beginner (Oracle):** Awarded for single-handedly bootstrapping the RTHS Android client and delivering a revenue-generating POC ahead of strict deadlines.
- **Autonomous Robotics Competition:** Secured 1st Place (out of 25 teams) for designing autonomous navigation algorithms.

Education

National Institute of Technology, Jamshedpur, B.Tech. in Computer Science and Engineering

August 2019 – June 2023

- **CGPA:** 8.49/10.00
- **Coursework:** Object Oriented Programming, Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks
